About Us

Dindas Australia is an Engineered Wood Products company that has been in the building industry for over 65 years. We focus on providing our clients with the highest quality building products and services available in the industry.

“I think the market’s realising that timber is not only a viable alternative, it’s a better alternative to concrete and steel. There are jobs out there where the people are using timber not just because it’s environmentally friendly, not just because it traps carbon, but because of it’s weight.”

Robert Dindas

Dindas Australia
was founded in
1958, VIC, Australia
by Feliks Dindas.

Robert Dindas
Managing Director,
continued with the
company legacy.

Dindas Australia has become the market leader in engineered timber, supplying their product to the Olympic Games Village in the mid-1990s. This success has led to increased popularity and usage of engineered wood in house and commercial applications. Timber is now recognised as a better alternative to concrete and steel due to its environmental friendliness, weight, and cost savings in installation time and other building costs.

Dindas Australia has created the Dindas Design Centre to educate and promote engineered timber in the building industry. The Design Centre offers customised solutions for different building projects and uses 3D software to help customers and contractors visualise their construction in

three dimensions.

The staff at the Design Centre are experienced and knowledgeable in the product, and the company’s commitment to top-level service ensures that all products are delivered on time and correctly.

Dindas provides LOSP Timber Treatment with consistency in size and is looking for newer alternatives. It’s exciting to know about the increased demand for LVL and other engineered products in Australia, with the offering continuing to mature in the face of a developing market. With Dindas Engineering, the future of timber, you can be assured of remarkable service and quality engineered wood for any project.

The National **Team**

We very proudly remain an Australian owned timber import and wholesale company with strong values based on people, passion and innovation. We empower our people to understand our customers' needs and continually work hard to exceed them.

Our Statement

For more than 65 years, Dindas Australia has been a trusted wholesaler, we serve as the crucial connection between producers and merchants in the industry.

Mission Statement

We are committed to providing the highest quality Engineered Wood Products and services with our expertise in developing and maintaining industry best practices while maintaining our leading position in the industry.

Values

Quality

We provide the facility, latest equipment, and technical expertise to ensure streamlined quality products.

Innovation

Implementing innovative technology in all products is our way to retain our leading position in the industry.

Solution

Product solutions tailored to meet our valued customers' expectations.

Customer

Providing remarkable customer service is our top priority.

At our company, we specialise in supplying high-quality building products and services. As a trusted wholesaler, we serve as the crucial connection between producers and merchants in the industry.

As a leading wholesaler, we connect producers and merchants with top-quality building products and services. Our commitment to maintaining industry standards sets us apart from the competition. We proudly source our products from the finest suppliers in New Zealand, Asia, Europe, the West Coast of the USA, and Canada.

What We Offer

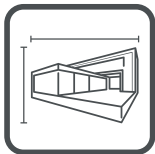

We provide unbeatable cost-benefit in our product and service combinations to our customers and distribute environmentally responsible products for our planet's long-term benefit.

Dindas Australia is a company that specialises in timber technology. Our goal is to improve the industry and benefit merchants and end-users by promoting innovative solutions through better processes. Our products are known for their high strength, durability, beauty, uniqueness, and longevity. We use advanced technology and professional expertise to create superior products that are tailored to meet specific needs. Additionally, we offer a range of services to enhance our products, such as:

Technical support

- Our EWP designer team has diverse design discipline knowledge, ensuring exceptional technical support.
- Access to comprehensive technical support for all your needs.

Website Resources & Services

- Resources with up-to-date information on Products and Services.
- Simple and effective online Interactive Span Tables that provide quick and accurate individual member designs.

Advanced Logistics Services

- Live Customer communications with the Security of delivered goods via completed delivery site images.
- Latest vehicle tracking software with route optimisation for faster on-time deliveries.

Increased Product Capacity

- We have an increased capacity to value-add with our state of the art estimating, take-offs, and other services.
- Guarantees that our take-off quantities are correct every time.

Sustainable Sourcing

- As a Carbon Warrior partner, we only work with suppliers with verified Wood Source Certifications for responsible and sustainable timber.
- Chain of Custody certification compliant for well-managed and sustainable forests.

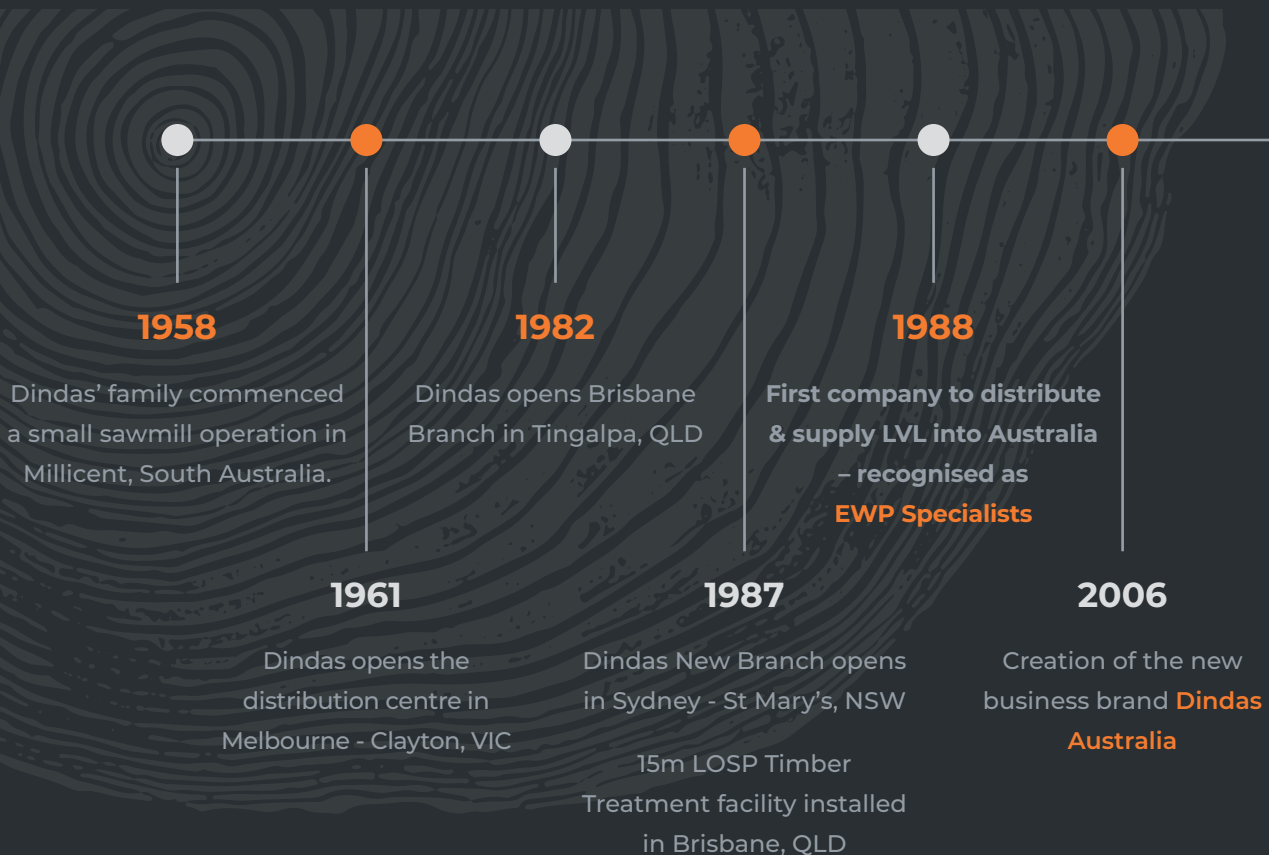

Dindas Australia Milestones

At Dindas, we feel good knowing that we responsibly source and deliver products for our customers, which helps reduce our carbon footprint. Our valued manufacturing partners share in our desire to be sustainably responsible and continue to push forward harnessing technology to deliver better, more efficient engineered wood products.

Timber Wood Grain, refers to the orientation of the wood-cells fibers.

The inspiration behind the Dindas Australia Logo was to create a strong connection with the product in the first place. After a creative insight, the logo was defined by a close-up view of the tree rings, or growth rings, in the cross-section of a log in the sawmill yard before going to processing. A drawing of that timber fibre orientation was used as the basis

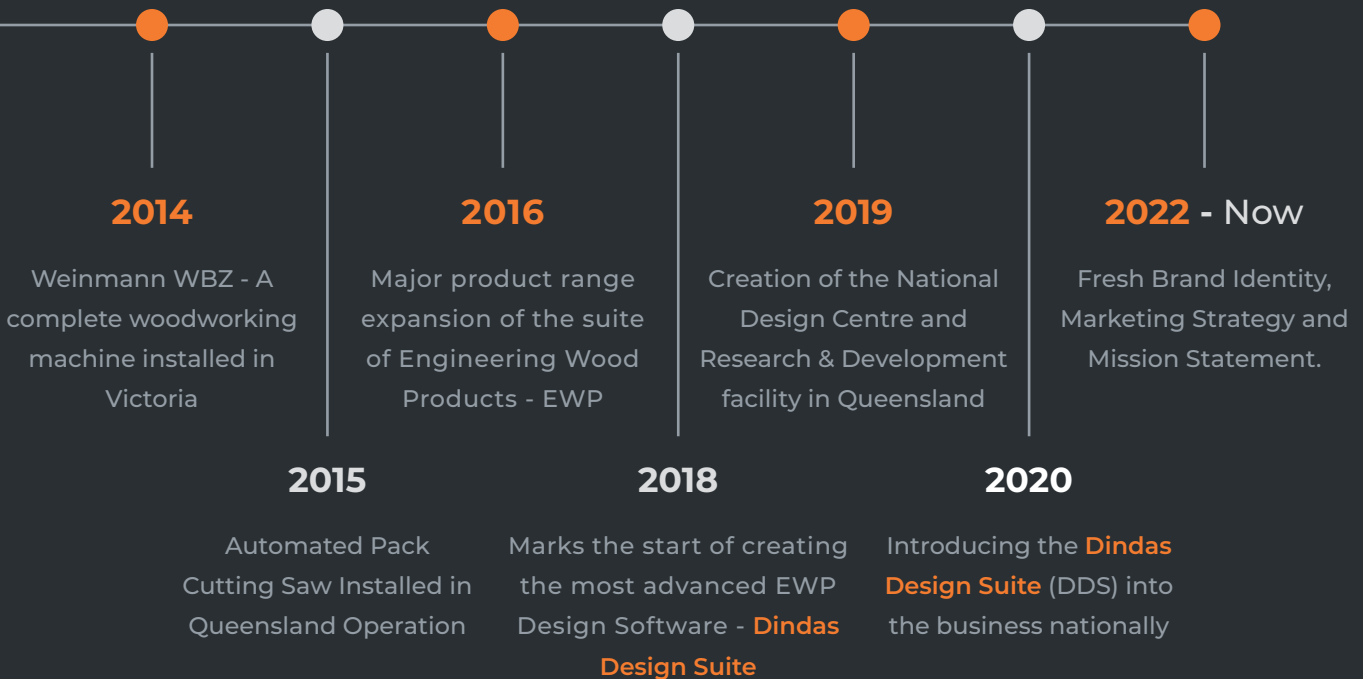

for the design. The business name lettering was then placed on top, resulting in the iconic Dindas Logo that has been inspiring generations since its inception.

Today, that same wood grain is used in all product categories, with a specific section of the exact timber grain starting from the centre of the wood log that also displays the earliest stages of a tree's growth, as shown in the picture.

For Dindas Australia, this balance between product offering and business sustainability is flawless with the cognition of its brand values.

We commit to long-term trading that adds value and offers solutions while being environmentally and socially sustainable. This approach is tailored to accommodate the trends of both present and future times.

Our Expert Team

Achieving great things requires the expertise of a team, and at Dindas Australia, our Engineered Wood Specialists work together to provide exceptional results. With a commitment to the overall goal, our teams move faster, innovate more, and achieve remarkable success.

WE ARE ENGINEERED WOOD SPECIALISTS

We proudly remain an Australian-owned timber import and wholesale company with strong values based on people, passion and innovation. We empower our people to understand our customer's needs and work hard to exceed them continually.

We employ a large, talented and diverse group of people across the Dindas Australia Group, which includes our global design operations and business partners across Australia, New Zealand, the United Kingdom, the USA, and South-East Asia.

Robert Dindas

Managing Director

With over 48 years of experience in the timber industry making Dindas Australia the pioneer of Engineered Wood Products in Australia.

John Cannard

Chief Operating Officer

With 29 years in the building/ timber industry, and 10 with Dindas, John oversees the work at the NDC; however, he focuses on the business's overall operations.

John Horan

Chief Financial Officer

John is a highly experienced and respected CFO who brings over 20 years of financial expertise to advance company growth and contribute to the company's ongoing development.

Fiona Luckey

National Specification Manager

With 35 years in the building/ timber industry, and 6 with Dindas, Fiona works closely with external stakeholders and partners to promote our products and services.

Scott Kendall

National Sales Manager

With 18+ years in the building/ timber industry, 12 with Dindas. Scott oversees one of the largest LOSP treatment plants in the region. He has extensive knowledge of EWP.

Magdaline Galanti

General Manager, Business & People

The past 9 years Magdaline's role evolved from EA and HR Admin to GM, Business, and People. Leading employees while maintaining and implementing systems related to People and culture.

Malcolm Johnston

State Manager VIC

With 35+ years of experience in the building/timber industry, 2 with Dindas. Malcolm manages the Sales and Estimation departments while overseeing the Victorian and Tasmanian regions.

John Ifield

State Manager NSW

With 30 years in the building/timber industry, 3 months with Dindas. John manages the Estimation, Sales, and Operations teams in NSW.

Justin Lanyon

State Manager QLD

With 35+ years of timber industry experience and commitment to driving positive change and fostering a culture of collaboration and success in Dindas Australia QLD's growth.

The Design Centre

Our Design Centre prides itself on its designers' expertise. Unlike other companies, we don't train estimators to handle basic BOM (Bill of Materials) take-offs. Instead, we focus on developing highly skilled EWP designers in various design disciplines who can provide outstanding technical support.

- Complimentary service for our registered customers
- Compliant, Cost-effective design solutions
- Detailed 'easy to follow' site layouts (Residential & Commercial)
- 3D building details for better on-site construction
- Certified designs to relevant state Building Acts and Regulations
- Fully itemised BOM (Bill of Materials) reports ensuring nothing is missed
- Full CAD file support – Import and Export options
- With a 5-day estimate turnaround, we can keep your projects moving

We offer the whole package

Using cutting-edge global timber design software, our designers create easy-to-read design documentation with illustrated installation details that are easily understood on-site. In addition, our EWP Designers are efficient in a wide range of design, estimating and detailing software programs, especially our exclusive Dindas Design Suite software modules.

Our EWP designers are respected professionals within the industry, known for their attention to detail and dedication to excellence. This skillset ensures we deliver cost-effective, sustainable, and fully compliant designs that meet Australian building and engineering standards.

At Dindas Australia, you can trust us to provide complete design outcomes that exceed your expectations.

Workflow Management

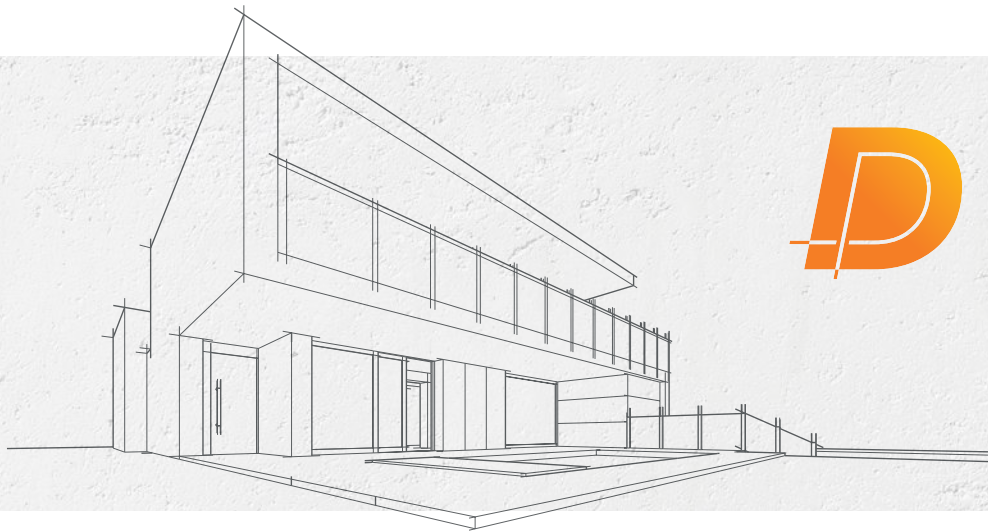

We understand the importance of timely project completion, which is why we have developed a custom Workflow Management solution. Our software streamlines resource and data allocation, minimising turnaround times and ensuring efficient project delivery.

Our automation efforts extend beyond project completion. Our software also generates detailed reports, including the number of completed estimates, variations (or requotes) numbers to orders, builder-specific estimates, and sales representative-specific estimate requests. Our Workflow Management solution allows you to streamline your business operations and optimise your team's efficiency.

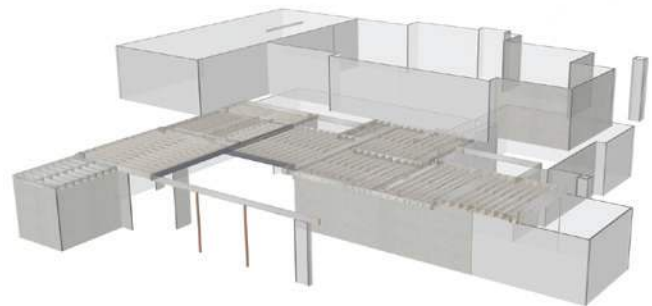

Choose us as your Workflow Management partner and enjoy a faster, more efficient project delivery.

The Dindas Design Suite

The Dindas Design Suite® is the most powerful 'EWP' Design software available in the industry. It is provided exclusively by Dindas Australia, featuring the isPlan®, isDesign® and isView® engineering software framework.

- Easy-to-follow and comprehensive layouts for both residential and commercial buildings;
- Certified designs in compliance with the state Building Act and Regulations;
- Complimentary design and take-off from building plans;
- Cost-effective design and building solutions;
- Comprehensive Technical support.

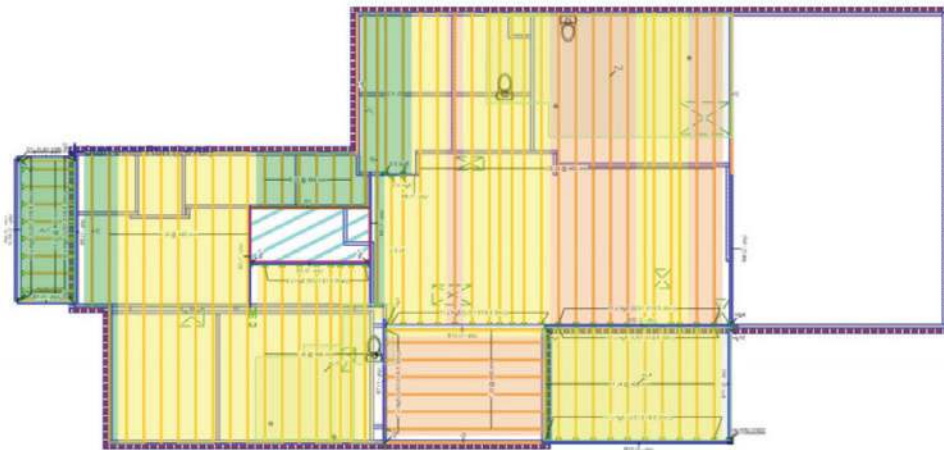

Dindas technical support

Dindas Design Suite, or "DDS", is a top-of-the-line software package that evaluates load paths throughout a structure to ensure compliance with Australian standards. DDS's single-member tool allows our designers to create components that meet all AU/NZ building codes.

The Feature Tools in DDS software offer the flexibility to manually add different types of loads and design fasteners for multiple members. It also allows users to create different hole shapes in joists and beams, capable of working as an analysis tool for locating shear and moment results. Additionally, DDS can check notches and sloped end cuts in beams, making repairs a breeze.

The DDS-iStruct® application suite is an essential tool for the design, specification and delivery of structural products in residential and commercial construction.

Heat Mapping Technology

Designers face the challenge of achieving a high-performing design while keeping costs in check. In the past, they had to manually evaluate the performance of each joist or wait until the entire design was complete to assess overall performance. This process was time-consuming and could result in costly changes.

With our exclusive “heat mapping” technology, our EWP designers now have access to the most advanced tool in the EWP software market. This technology allows them to make performance-based decisions in real-time, resulting in the most efficient and top-rated design solution.

Our advanced design analysis tool built into DDS allows users to check the entire floor area for optimal performance in one go, covering all essential design principles as follows:

- Deflection – Live Load L/x
- Vibration (FNF checks)
- Deflection Live Load – mm differences across joist areas
- Deflection Total L/x
- Deflection Total Load – mm

deflection differences

- Moment Analysis
- Shear Analysis

The results are reported via a custom colour-coded system that indicates % increases over the Australian Standard set limits.

Dindas technical support

Dindas Pre-Qualification Interactive Form is your gateway to the Design Process. By filling out this form, you can expect accurate and fast results.

To ensure a prompt turnaround for your detailed layouts, we suggest that you prepare the following:

- Architectural plans
- Engineering plans
- Your preferred method of construction

The more information you provide, the better we can assist you. If you need guidance or are trying to decide what to include, our experienced team is here to help. Contact us today!

Research & Development Lab

Since July 2020, Dindas Australia has had an in-house engineering lab equipped with the latest Japanese universal testing equipment. Our engineering team utilises this lab to continuously test, analyse, and discover product solutions for our customers in the building industry.

Our products are certified, audited, and compliant with Australia's ever-changing compliance standards.

When we design a new product or combination of products to solve a building problem, we stand by it, backed by manufacturers and our internal testing programs. Furthermore, our lab equipment is continually calibrated to NATA standards by independent external calibration experts for your peace of mind.

In addition, our National Design Centre team has full-time engineers that provide design and technical support nationwide, including:

- Commercial and advanced design support
- Remedial and rectification design plan and certification
- Product specification and design compliance
- Lab testing and certification
- Independent product verification

Lately, at our R&D laboratory, we have been evaluating the withdrawal capacities of our latest and existing range of screws and nails in our Dindas LVL 14 F17 line.

Contact the National Design Centre team to discuss how we can work together to solve any engineering needs you may have. Choose Dindas Australia for compliant, sustainable timber solutions that exceed expectations every time!

Advanced Logistics

Dindas Australia is a leading logistics integrator with a global network that offers comprehensive shipping solutions to our valued clients and partners.

- Hassle free direct to site delivery
- Live Customer communications
- Driver safety management
- Assurance of delivered goods via completed delivery site images
- Modern vehicle fleet
- Compliant and fully experienced drivers
- Latest vehicle tracking software
- Route optimisation for faster on-time deliveries

Our tailored services are designed for growth and success, providing you with professional and advanced support every step of the way. Trust us to help your business thrive.

Supply Chain & Traceability

Our system is equipped with advanced product traceability technology that enables us to identify and track the history and sustainability of all Dindas Australia products.

The advanced supply chain connectivity and innovation of Dindas Australia offers an integrated supply, logistics, and data management system that ensures timely and tailored delivery to all parties, suppliers or customer stakeholders.

We take pride in our comprehensive product traceability system, designed to provide complete transparency and quality control throughout our supply chain operations.

This technology is instrumental in ensuring that we maintain the highest quality standards in our products in our supply chain.

Our traceability system enables us to quickly trace any product back to its source, and this helps us minimise any potential harm or damage to our customers and maintain their trust in our products.

At Dindas Australia, we are committed to providing our customers with the highest quality products and services, and our comprehensive product traceability system is just one of the many ways we achieve this.

Sustainability

Dindas Australia has always taken our environmental responsibilities as a timber wholesaler very seriously.

Our strategic timber manufacturing partners share in our sustainability vision. Together, we're committed to applying sustainable practices across all aspects of our business, from manufacturing processes to safe, healthy working conditions for our staff.

As a Carbon Warrior partner, we are committed to mitigating the building and construction industry's impact on climate change with timber as a versatile solution to decrease material cycle emissions by up to 80% by 2050.

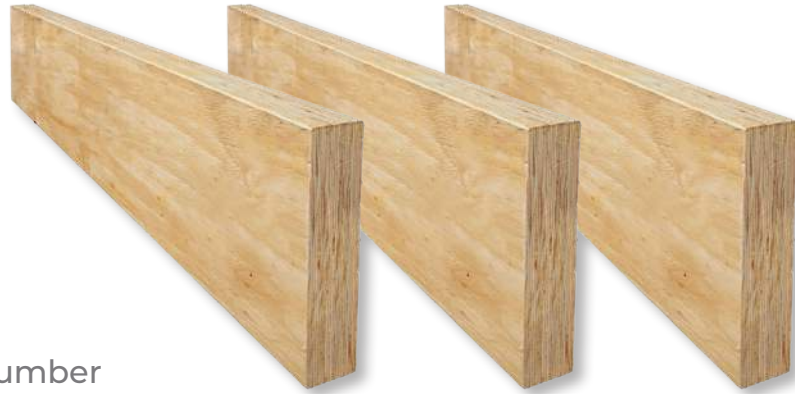

We, together with all chosen partners and suppliers, are truly committed to sustainable forest management generating over 230 million kilowatt-hours of power.

Dindas LOSP Timber Treatments

Dindas Australia provides a complete treatment solution. We have been offering specialist LOSP treatment for over 25 years.

Our on-site treatment facility allows for flexible and fast turnaround time for H2 and H3 LOSP Timber Treatments.

You can rest assured with our expert knowledge of treated timber for all structural, outdoor, and above ground building needs.

- Well-suited for re-manufactured and engineered wood products.
- Durable and safe protection.
- Dimensionally stable (due to the LOSP treatment).
- Non-corrosive to nails and fixing.
- Long lengths up to 13.2m
- Treatment DNA Traceability for compliance
- Twenty-five years guarantee* against termite and fungal attack.

Our treatment facility is one of the most extensive treatment facilities in Australia. Dindas treat timber and engineered wood products, but we also provide custom treatment services for many merchants and wholesalers. The facility is the only Queensland-based treatment plant that offers a clear H2 & H3 treatment that requires no re-drying or impacts the stability of dimensional size after treatment.

Dindas Australia has built a reputation as a leader in timber treatment. From engineered wood products to landscape products to structural framing and appearance-grade timber, our wood treatment process enables a sustainable natural resource to last longer than it otherwise could. LOSP Timber Treatment is the most advanced, proven, water-free timber treatment, providing superior protection against termite and fungal attacks.

Dindas has built a reputation as a leader in timber treatment. We apply innovative technology to all products, giving us a remarkable competitive advantage.
